Congo Boost contains high levels of naturally occurring growth stimulants and other essential compounds which promote strong root growth, reduce transplant shock, help plants cope with temperature extremes like frost, and strengthen cell walls to give plants better resistance to pests and diseases.

Benefits of CONGO BOOST :

- Stimulates strong root growth and beneficial soil micro-organisms.
- Promotes vigorous flowering & fruiting and overall crop health.
- Helps plants cope with all kinds of stress, such as heat, drought and frost.
- Safe to use on all plants at any time
- Improves seed germination rates and reduces transplant shock.
- Helps to increase nutrient uptake, so when fertilizers are applied they are much more effective.
- They Contains almost every micro-nutrient in a fully chelated (immediately available) form.
- The organic matter is also full of carbohydrates, which plants use a building block.
- Increase in the size and weight of the grains/fruits. Higher yield and better quality of the produce

CONGO BOOST

SUSPENSION MICRONUTRIENTS

In technology partnership with **cropthetics UK**

Dose :

Foliar Spray : 100-200 ml in 200 ltr. water.

Method of application :

The Spray tank should be filled with half of the required amount of water. Measure the required amount of **CONGO BOOST** and **add to the tank** whilst maintaining constant agitation. Add remaining water to correct dilution Spray.

Storage : Store in cool and dry place, away from children reach.
