

Form / Base	Liquid
pH	6.0 to 7.5 ml
Total viable propagules/gm of product	100 ml and 8000 spores per ml
Infectivity potential	Inoculum potential: 30 X 10 ⁴ IP/g (determined by MPN method with 10 fold dilution)

DILJIT Soil+ is a high quality Bio fertilizer containing Mycorrhiza with optimum quantity of growing Substrate Consisting of Humic acid Naturally derived phytocompounds and Amino acid in a Fine liquid with Carrier based Consortia formulation designed for overall root improve soil texture, Structure and aeration.

DILJIT Soil+ also contains PGR and Bio Stimulant which improve Mycorrhiza germination and enhances its multiplication. Mycorrhiza reduces the population of pathogenic fungi and bacteria, improves soil fertility and nutrient uptake by roots of the crop. In addition to increasing disease tolerance it also enhances the stress tolerance of crop to biotic and abiotic factors, encouraging healthy growth and improved yield.

CROPS RECOMMENDED : Cumin, Groundnut, Cotton, Vegetables and all other crops.

DOSE : 300 to 400 ml /Acre.

DILJIT Soil+ can also be applied as Herbigation Drip irrigation, Soil drenching or Broad casting mix sand.

NOTE : Store in Cool, Dry Place, keep away from children. Away from Direct Sunlight & Heat.

1. **DILJIT Soil+** is high quality bio fertilizer containing mycorrhizal fungi.
2. It colonizes the roots and spreads into the surrounding soil in a symbiotic association with crop plants.
3. **DILJIT Soil+** also contains PGR and bio-stimulants which improve mycorrhizal germination.
4. Mycorrhiza bacteria reduce the population of pathogenic fungi
5. **DILJIT Soil+** act as a Soil Spreader and penetrate the irrigated water towards root zone.
6. Increases the water infiltration and water-holding capacity of the soil.
7. **DILJIT Soil+** helps to maintain a more uniform soil temperature. Also improves the Soil Fertility and enhance the lateral root system.
8. It improves soil structure and promote beneficial microorganisms in the soil
9. **DILJIT Soil+** rejuvenates and replenishes the soil with functional micro organisms.
