

GLOMUS WP is a high quality Bio fertilizer containing mycorrhizal fungi. It colonizes roots and extend into the surrounding soil forming a symbiotic association with crop plants, which encourages healthy plant growth and higher yield.

GLOMUS WP also contains PGR and Bio Stimulant which improve mycorrhizal germination and enhances its multiplication. Mycorrhizae reduces the population of pathogenic fungi and bacteria, improves soil fertility and nutrient uptake by roots of the crop. In addition to increasing disease tolerance it also enhances the stress tolerance of crop to biotic and abiotic factors, encouraging healthy growth and improved yield.

Form / Base	Water Soluble Powder
pH	6.0 - 7.5
Total viable propagules gm / product	100 gm of finished product with minimum 2500 spores per gram

Dose: Apply GLOMUS WP 100gm/acre within 10-15 days of sowing/transplanting. GLOMUS WP can also be applied as Herbigation through Drip Irrigation.

In case of broad casting, mix 100gm of GLOMUS WP with one litre of water and solution need to be applied to 15-20 kg of sand and mixed thoroughly. GLOMUS WP coated sand then can be broad casted uniformly in one care. After broad cast, irrigate the field in 48 hours.

NOTE: Store in Cool Dry place. Keep away from children. Away from direct Sunlight & Heat.
